

POFIX-110

Description

Mortar with a cement base

Pofix 110 is a mortar with white cement, lime, and an additive base for machine and hand application. It is used as a base mortar for final mortars with mineral content, structural mortars, and lubricating mortars. It is applied to outside and inside walls of brick, concrete, styrofoam, concrete elements in damp rooms, rough concrete surfaces, ceilings, facades, etc. The use of Stirokolit or Poflex is essential on smooth concrete surfaces.

Preparation and Parameters application

Time for
application
after mixing /
with water

Drying time
of material 24 h.

Application
thickness Â 18 mm.

**Preparation
and Parameters
application**

Granulation 1.3 mm.

Consumption 18 kg/m².

The
temperature
of the air +5/+35°C
and surface

Color

Kg bag 30

Bags/pallet 42
