

## POFIX 322

### Description

#### Glazing

**Pofix 322** is fabricated material-glazing(finish glaze)on the basis of cement and lime for internal and external walls. It is used for glazing of basic mortars (Pofix 10, Pofix 090, etc), delicate mortars concrete surfaces, and less wet places.

When it is completely dry it can be colored over or covered by wall papers.

#### Preparation and Parameters application

Time for application after mixing with water	20 min.
Drying time of material	18 h.
Application thickness	1.5 mm.
Granulation	0.6 mm.
Consumption	1.5 kg/m2.

**Preparation  
and Parameters  
application**

The  
temperature  
of the air     +5/+35Â°C  
and surface

Color

Kg bag         20

Bags/pallet    60
