

POFIX-90

Description

Mortar with gypsum base

Pofix 90 is the mortar with gypsum, lime, and additive primer for machine and hand application. It is used as a base mortar for finishing mortar with mineral content, structural mortar, and sliding mortar. Applied in interior walls, bricks, concrete blocks, rough concrete surfaces, ceilings, etc. The use of Pobetonconactit is essential on smooth concrete surfaces.

Preparation and application Parameters

Time for application after mixing with water	/
Drying time of material	24 h.
Application thickness	Â 18 mm.
Granulation	0-1.3 mm.
