

POFUGENFILER

Description

Mass for joint filler

Pofugenfiler is a fabricated powder material for joint filler plaster tiles. A tile joint filler band is used on plaster cardboard with oval edges. Plaster-cardboard tiles have to be fastened on a strong under construction and the fudging places should be clean, dry, and without dust.

Preparation and Parameters application

| | |
|--|-----------|
| Time for application after mixing with water | 60 min. |
| Drying time of material | 24 h. |
| Application thickness | 3 – 5 mm. |
| Granulation | 0.7 mm. |

Preparation and Parameters application

Consumption 4- 5 kg/m².
