

POPUTZGRUND

Description

Poputzgrund

It is a basic resin for internal and external use. Before applying the product should be mixed with 30% clean water. It is laid manually with a brush or cylindrical roller. At dry and porous surfaces Poputzgrund should be applied twice between 2-3 hours. The drying time is 24 hours. Keep on places protected from freezing.

Preparation and Parameters application

Time for application after mixing with water	2 h.
Drying time of material	12 h.
Application thickness	1 – 2 mm.
Granulation	0-0.7 mm.

Preparation and Parameters application

Consumption 350 g/m².
