

STIROKOL

Description

Adhesive for EPS and isolation boards

Stirokol is fabricated thin layer of glue on the basis of cement and complements. Stirokol is used to stick boards over bricks, concrete, old mortar, etc. The base must be strong, smooth, clean of dust, and not frozen. The new formulation of Stirokol with cellulose fiber preserves the surface from cracking and makes it stronger and more resistant to temperatures.

With its new features, Stirokol can be used for the adhesion of stone wool.

Preparation and application

Time for application after mixing with water

Drying time of material

Application thickness
